PROFESSIONAL EXPERIENCE

Shield P2P, *iOS Engineer & AI Data Evaluator* 02/2025 – 09/2026 | Remote

- Design, develop and maintain efficient iOS applications using Swift and strict MVVM architecture.
- Employ modular development and scalable architectures. Focus heavily on code readability, security and stability through comprehensive XCTest implementations.
- Applied Java best practices for modular, scalable, and secure code while collaborating on cross-functional AI model improvements.
- Evaluate and rank software development prompts and responses across diverse domains. Ensure optimal logic, clarity and technical accuracy.
- Develop comprehensive explanations and rationales for code evaluations in Google Colab and markdown. Support foundational Large Language Model (LLM) fine-tuning.
- Conduct thorough peer reviews of code and documentation. Provide constructive feedback to align with predefined performance criteria.
- Designed and maintained high-quality Java-based backend components to support LLM training pipelines and evaluation workflows.

Rhobot Capitals, *Fulltime Flutter Developer & LMS Co-Developer* 01/2024 – 02/2025 | Remote

- Architect and maintain the Rhobot Capitals Forex trading mobile application. Ensure a seamless cross-platform experience for iOS and Android users.
- Implement real-time WebSocket connections to stream live market data. Reduce data latency by 30% for active traders.
- Integrate interactive charting libraries and secure payment gateways. Maintain strict data security protocols.
- Utilize advanced state management techniques. Ensure high app performance and minimal battery consumption during trading sessions.
- Co-engineer a scalable end-to-end Learning Management System (LMS). The platform currently supports over 2,000 active students.
- Design and implement robust backend schemas. Handle course management, secure video streaming and automated certificate generation.
- Build intuitive student dashboards with progress tracking and interactive assessment modules. Increase user engagement by 35%.

Chiraro Digital Solutions, *Web Application Developer* 06/2023 – 12/2024 | Remote

- Tech Stack: JavaScript, HTML/CSS, React.js, Web Analytics Tools
- Develop and maintain custom web applications for local business clients, focusing on high performance, accessibility, and Core Web Vitals.
- Refactor legacy codebases into modern, modular component structures, significantly reducing technical debt and speeding up new feature deployment.
- Optimize full-stack architectures for maximum speed and technical SEO, organically improving client search engine rankings and increasing traffic by up to 40%.

EDUCATION

B.Sc. in Computer Science, *University of the People* 06/2013 – 12/2025 | Pasadena, CA (Remote)

- Coursework: Data Structures, Algorithms, Software Engineering, Databases, Computer Systems.

Software Engineering Program, *ALX-Africa* 01/2020 – 01/2021

- Rigorous 12-month program focused on low-level programming (C), high-level languages (Python/JS), system design, and collaborative version control.

TECHNICAL SKILLS

Languages: Java, Swift, JavaScript, TypeScript, Dart, Python, C++, C, HTML5, CSS3

Frameworks & Libraries: iOS SDK, Flutter, React.js, Next.js, Node.js, Django

Core Competencies: MVVM Architecture, Modular System Design, AI Model Evaluation, Data Structures, Object-Oriented Programming, State Management, Technical SEO

DevOps & Tools: XCTest, Google Colab, Jupyter, Git, GitHub, GitHub Actions, Postman, Figma, Vercel

Backend: Firebase, PostgreSQL, MongoDB, RESTful APIs, JWT Authentication

KEY TECHNICAL PROJECTS

Smart Retail E-Commerce Platform, *React.js, Node.js, MongoDB*

- Built a full-stack dashboard allowing users to track inventory, process mock payments, and visualize sales data in real-time.
- Implemented token-based JWT authentication and a CI/CD pipeline using GitHub Actions for automated Vercel deployments.

Automated Task Management API, *Python, Django, PostgreSQL*

- Developed a scalable RESTful API to handle complex CRUD operations with optimized database queries, reducing average server response times to under 200ms.
- Integrated comprehensive endpoint testing using Postman to ensure high reliability across all user roles and permissions.

LLM Swift Evaluation Suite | Swift, Python and XCTest

- Built a benchmark dataset of 500 Swift coding prompts to test model performance.
- Evaluated AI code outputs using RLHF protocols to improve accuracy and security.
- Wrote technical rationales in Google Colab to guide Supervised Fine-Tuning.
- Designed modular test cases with XCTest to verify generated code logic.
- Extended evaluation framework with Java backend utilities for dataset processing and automated testing, ensuring high code quality and reproducibility.
